

Area-Wide Optimization Program Microbial Optimization Goals and Guidelines: Rapid Rate, Membrane, and Slow Sand Filtration

Monitoring & Operating Goals Summary

Category	Goal/Guideline	Status	Description	References
Rapid-Rate Filtration	Raw Water Turbidity Monitoring Goal	Adopted	<ul style="list-style-type: none"> Record maximum daily raw water turbidity. 	U.S. Environmental Protection Agency, 2004
Rapid-Rate Filtration	Individual Sedimentation Basin Monitoring Goal	Adopted	<ul style="list-style-type: none"> Record individual sedimentation basin effluent turbidity readings at intervals of 4-hours or less if taking grab samples, or 15-minutes or less for continuous monitoring. 	U.S. Environmental Protection Agency, 2004
Rapid-Rate Filtration	Individual Filter Effluent (IFE) and Combined Filter Effluent (CFE) Monitoring Goals	Adopted	<ul style="list-style-type: none"> Record IFE and CFE turbidity readings at intervals of 1-minute or less for continuous monitoring. 	U.S. Environmental Protection Agency, 2004
Rapid-Rate Filtration	Disinfection Monitoring Goal	Adopted	<ul style="list-style-type: none"> Record disinfectant residual, temperature, and pH at maximum daily flow for CT calculations. 	U.S. Environmental Protection Agency, 2004
Membrane Filtration	Membrane Operational Guidelines	Proposed	<ul style="list-style-type: none"> Permeability: Normalized permeability recovery after cleaning $\geq 90\%$ of normalized permeability when newly installed. 	U.S. Environmental Protection Agency, 2005
Slow Sand Filtration	Slow Sand Monitoring Goals	Proposed	<ul style="list-style-type: none"> Collect weekly IFE total coliform (TC) and <i>E. coli</i> samples prior to disinfection. Collect daily IFE and CFE turbidity measurements. Collect TC samples from the plant effluent weekly when IFE or CFE turbidity is > 1.0 NTU. Monitor hydraulic loading rate. Monitor filter effluent dissolved oxygen. 	<p>Oregon Department of Public Health, 2015</p> <p>Washington Department of Health, 2018</p>
Slow Sand Filtration	Slow Sand Operational Guideline	Proposed	<ul style="list-style-type: none"> Filter-to-waste (FTW) one hour for each hour the filter is offline, but ≥ 24 hours, until the following have been met: 1) IFE TC $\leq 5/100$ mL after 24 hours; 2) IFE <i>E. coli</i> = absent; 3) IFE turbidity ≤ 1.0 NTU. Maintain consistent hydraulic loading rate and minimize rapid changes. Limit hydraulic loading rate to 0.10 gpm/ft². Maintain at least 3 mg/L DO in filter effluent 	<p>Oregon Department of Public Health, 2015</p> <p>Washington Department of Health, 2018</p>

Performance Goals & Guidelines Summary

Category	Goal/Guideline	Status	Description	References
Rapid-Rate Filtration	Individual Sedimentation Performance Goals	Adopted	<ul style="list-style-type: none"> Settled water turbidity ≤ 2.0 NTU in 95% of readings when the annual average raw turbidity is > 10 NTU. Performance is assessed based on the daily maximum values recorded from all readings. Settled water turbidity ≤ 1.0 NTU in 95% of readings when the annual average raw turbidity is ≤ 10 NTU. Performance is assessed based on the daily maximum values recorded from all readings. 	U.S. Environmental Protection Agency, 2004
Rapid-Rate Filtration	IFE and CFE Performance Goals	Adopted	<ul style="list-style-type: none"> CFE turbidity ≤ 0.10 NTU in 95% of readings. Performance is assessed based on the daily maximum values recorded from all readings. IFE turbidity ≤ 0.10 NTU in 95% of readings (excluding 15-minute period following filter backwash). Performance is assessed based on the daily maximum values recorded from all readings. Post backwash IFE turbidity for filters without FTW capability: Maximum IFE turbidity following backwash ≤ 0.30 NTU and achieve ≤ 0.10 NTU within 15 minutes. Post backwash IFE turbidity for filters with FTW capability: Minimize IFE turbidity during FTW period and record maximum value. Return the filter to service at ≤ 0.10 NTU. 	U.S. Environmental Protection Agency, 2004
Rapid-Rate Filtration	Disinfection Performance Goal	Adopted	<ul style="list-style-type: none"> Meet CT requirements to achieve inactivation of <i>Giardia</i> and viruses plus a system-specific factor of safety. 	U.S. Environmental Protection Agency, 2004
Membrane Filtration	Membrane Performance Goals	Proposed	<ul style="list-style-type: none"> Direct Integrity: Log Removal Value (LRV) should be ≥ 4.0-log and \geq the removal credit awarded by the regulatory agency. Indirect Integrity: Turbidity ≤ 0.05 NTU based on continuous monitoring. Indirect Integrity (Alternate): Particle counts ≤ 10 particles/mL in the $1-3 \mu\text{m}$ range. 	U.S. Environmental Protection Agency, 2005
Slow Sand Filtration	Slow Sand Performance Goals	Proposed	<ul style="list-style-type: none"> IFE TC counts $\leq 5/100$ mL and absence of <i>E. coli</i>, based on weekly samples. IFE and CFE turbidity ≤ 1.0 NTU in 95% of highest daily readings. IFE and CFE turbidity ≤ 5.0 NTU in all readings. Plant effluent is absent of total coliform, based on weekly samples whenever IFE or CFE turbidity is > 1 NTU. 	<p>Oregon Department of Public Health, 2015</p> <p>Washington Department of Health, 2018</p>
